

January 25, 2021

TO: All Gear Lubricant Presenters

Information Letter: GL-21-01

Subject: Nitrogen Testing

Dear Presenters:

Effective January 25, 2021 and based on an LRI Committee WebEx/Telecon Meeting held on January 25, 2021, it was determined that an alternate Nitrogen Test Method per ASTM D5762 can be utilized.

The current required Nitrogen Test Method listed in PD4000 is per ASTM D3228. This document is being reviewed to change the catalyst currently required in that test method.

Only revision level dated 2020 for ASTM D3228 is permitted to be used at this time.

The Nitrogen Test Method will be updated in the next revision of PD4000.

Should you have any questions concerning this action, please contact me at PRI Headquarters at +1 724-772-8647 or via email at wgrubbs@p-r-i.org.

Sincerely,

Wendy L. Grubbs
